The Koeppen Climate Classification System

The Koeppen System has been used for over 100 years

Requirements:

System had to be global, so input data had to be simple, only monthly average temp and precip.

Boundaries of climate regions should coincide with boundaries of vegetation (ecosystem) regions.

The Koeppen Climatic Classification System Has Five Major Climate Groups Each Is Designated with an Alphabetic Letter

A Tropical Wet Climates

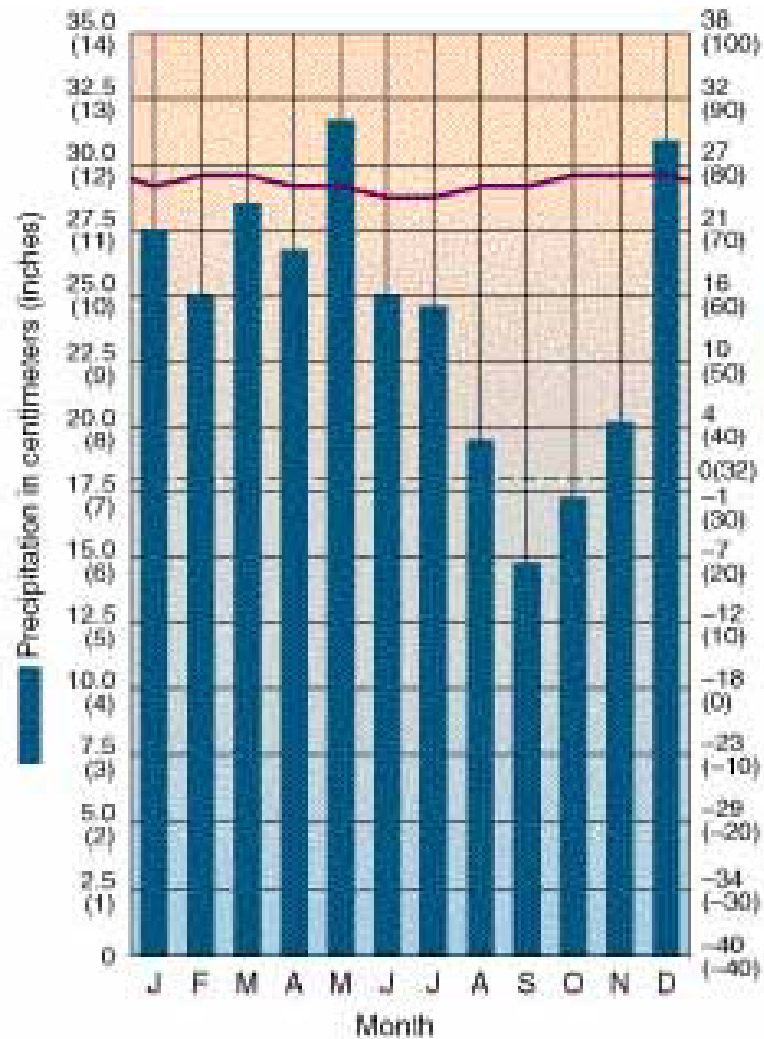

B Dry Climates, both desert and semi-desert

C Mesothermal, mid-latitude or subtropical seasonal

D Microthermal, humid continental

E Polar
